Split file in 7 zip

- Right click the file you want to split, then roll your mouse over the 7-Zip, then click Add to archive. In my tests I am splitting a testfile.exe that is 625MB.

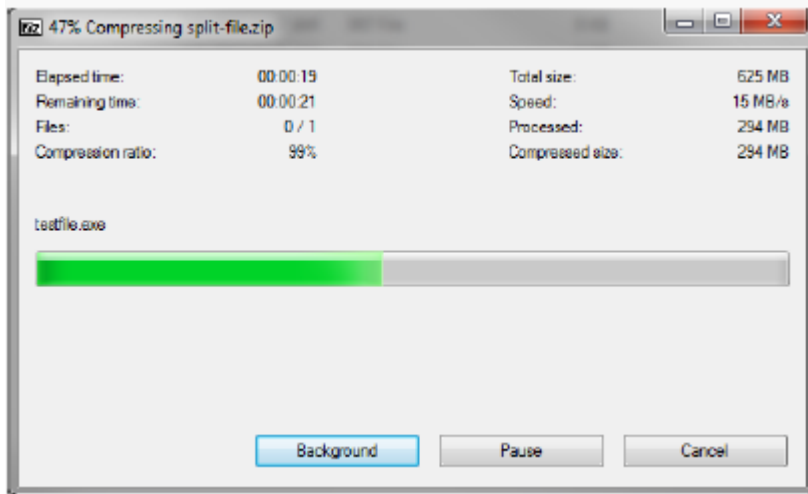

- The Add to Archive menu will come up, in the Archive format section click the drop-down box and select zip. Then in the Split to volumes, bytes section, enter or choose a size from the drop down menu. In my tests I am entering 20M for 20MB. You can also change the name in the Archive: section, be sure to keep the .zip extension at the end of the file name.

Knowledge Sharing

- Click the OK button. You will see a progress window displaying the status. This will take some time, depending on the size of the file.

- After this completes, you will see the separate files in the same location as the original file.

Name	Date modified	Type	Size
